## SupraPhysiologic

## The Power of Clinical PRP

Unmatched power and versatility meeting every clinical requirement

PurePRP<sup>®</sup> SupraPhysiologic is a clinical innovative phenomenon, that has unmatched processing power and versatility. It has distinct features that make it the world's leading PRP system. It provides the most abundant concentration of clinical PRP with deliverable platelet counts of 9 - 23 billion platelets in a 7mL sample (depending on the patients' baseline). It is the only PRP system uniquely capable of preparing high dose clinical PRP without inflammatory red blood cells. Its versatility allows users to select high or low granulocyte concentrations depending on the clinical requirement. Most importantly, it's the only point of care PRP system that does not create a diabetic hyperglycemic state at the application site, a condition that impedes tissue regeneration and promotes the glycation degradation of cartilage and other cell types. It is the reason why most regenerative practitioners choose EmCyte's PurePRP<sup>®</sup> products for their patients. For more information or advanced clinical training please call us at 239-481-7725.

## The Power of Clinical PRP

With protocol versatility to meet the clinical requirement

|                                    |              |
|------------------------------------|--------------|
| Hematocrit                         | Less than 1% |
| Platelet Concentration x Baseline  | 6-9          |
| Platelet Concentration Yield       | 80-95%       |
| PDGF Concentration x Baseline      | 6-9          |
| Inflammatory Granulocyte Reduction | 98%          |

*Results based on an average of 8.2mL of PurePRP<sup>®</sup>*
